

# HOSPITAL INFORMATION SYSTEM

*Transform Hospital Operations, Inspire Care, Transcend Boundaries*

## Napier HIS: Power to the Modern Hospital

The Napier Hospital Information System (HIS) is a modern solution that enables medical facilities to overcome the biggest challenges in healthcare today – achieving operational efficiencies and driving the healthcare provider community’s adoption of electronic medical record (EMR) technologies – and deliver superior patient care while lowering operational cost.

Napier HIS is a web-native, integrated, multi-facility, multi-lingual and scalable platform. It can be configured to meet all the information and communication needs of the administrative, operational and clinical departments of medium to very large hospitals and networks.

By giving all stakeholders involved in the operation of healthcare facilities secure and enhanced visibility into and control over their functions, HIS enables:

- \* Management to plan and chart topline growth more effectively
- \* Administrators to manage resources and staff for greater efficiency
- \* Doctors and Nurses to administer superior patient care and reduce errors
- \* Financial Officers to drive solid strategies to increasingly healthier bottom lines

HIS is also modular and can be integrated seamlessly with additional clinical and ancillary solutions to support the continuum of care and other standards-based third-party IT solutions.

# Modules

## Patient Management

- Registration
- Appointment scheduling
- ADT
- Medical Records Management
- Ambulance Management
- User Registration

## Clinical Management

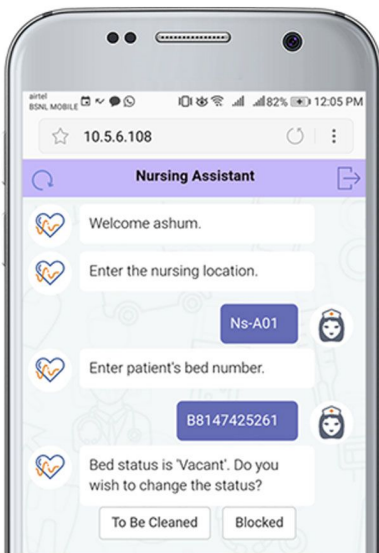

- Doctor Workbench
- Nursing Station
- Emergency Room
- Operation Theatre
- AI & Chat Bots
- Lab & Radiology
- Blood Bank

## Materials Management

- Purchasing
- Inventory Management
- Pharmacy
- Bio Medical Equipment
- Predictive Analytics

## Revenue Management

- OP Visit Management
- Contract Management
- Accounts Receivables
- IP Billing
- Doctor's Accounting
- Business Intelligence/ Analytics

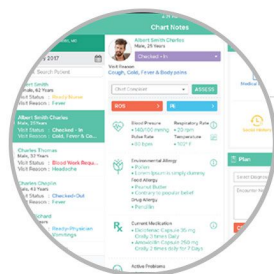

## Napier Assistant

An intuitive voice controlled chatbot that frees up medical staff to focus on doing their jobs better - caring for patients, and seeing to their needs on the spot. All they have to do is speak into the system to access and update patient and treatment information.

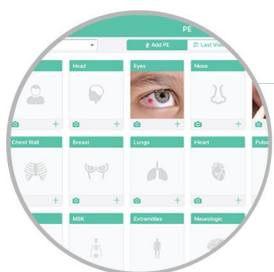

- Saves clinical staff's time on patient information access and updates
- Minimizes risks of clinical errors at point of health data capture (for example, by the patient's bed)
- Enhance patient experience with faster consultation and treatment, and reduced waiting times

## Solution Highlights

### USER EXPERIENCE

- Simple and intuitive
- Time saving
- User-centered design

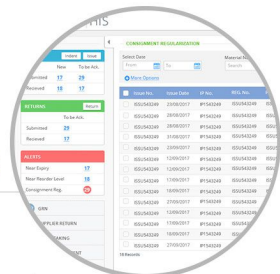

### SUPERIOR CARE

- Context aware clinical suggestions
- Enhanced interoperability
- Improved data security

### STREAMLINE OPERATIONS

- Increased control and transparency
- Prevent revenue leakage and pilferage
- Definable workflows

### BUSINESS INTELLIGENCE

- Go beyond reports
- Better strategic planning and decisions
- Real time operational analytics

## About Napier Healthcare

Headquartered in Singapore, Napier Healthcare Solutions is a specialist global technology vendor for healthcare providers. Since 1996, the company has been enabling medium to large private and public sector hospitals and hospital networks across the globe to capture and work with clinical information, streamline workflows, reduce medical errors, drive cost efficiencies and maximize profitability.

Napier Healthcare's expanded portfolio today covers the information needs of acute care providers and operators of long-term care facilities, such as hospices and nursing homes, as well as those of industries with specific healthcare IT needs, such as the aviation and maritime industries. To find out how Napier Healthcare can help your organization to derive top dollar returns on IT investments, make your way to [www.napierhealthcare.com](http://www.napierhealthcare.com) today.

Enterprise-ready mobile EMR solution for enhanced ambulatory care delivery.

Advanced telehealth solution for eldercare, chronic disease and convalescent care

Specialized medical record system for public and professional licensing authorities.

Cloud-based referral management platform that powers collaborative care coordination.
